

ABSTRACT OF THE DISCLOSURE

Obfuscating an application program comprises determining a current obfuscation method based at least in part on a target ID specifying a user device configured to execute the obfuscated application program, creating an obfuscated application program based at least in part on the current obfuscation method, and sending the obfuscated application program to the user device.

Executing an obfuscated application program comprises receiving an application program obfuscated based at least in part on a target ID, determining a current obfuscation method based at least in part on the target ID, and interpreting the received application program based at least in part on the current obfuscation method.
